Addrole

Command: Addrole

Module: Roles

Description: Addrole command is used to register a role as a 'custom role' to allow it to be handled by the bot. By default this role is added with no options and therefore can be added or removed by any member via !RoleName

Usage:

!addrole @role

!addrole 1234567890

This will add an already created role to the bot's list of custom roles

!addrole Rolename

This will create a new discord role and add it to the bot's list of custom roles
