

Configuration

Permissions

You'll need the following roles to use the commands marked with these icons

Everyone	Moderator+	Admin+	Gaius+
	Moderator	Admin	Gaius+ Feature

All configuration/setting commands require a role with `Administrator` or a role marked as Admin with Gaius.

Prefix

Sometimes bots overlap with their prefixes if that's the case for you with Gaius' default prefix `!`, then you can easily change it to suit your needs.

Command	About	Example
<code>!prefix</code>	Changes the prefix	<code>!prefix !!</code>
<code>!checkprefix</code>	Displays the current prefix	<code>!checkprefix</code>

Auto Delete

Want command messages like `!ban`, `!mute`, `!purge` etc deleted upon successful execution? (Enabled by default)

Command	About	Example
<code>!autodel</code>	Toggle autodel	<code>!autodel</code>

Notifications Feed

This will send error reports and important bot announcements into your designated channel.

!module notifications	Sets up the process for the notifications channel
-----------------------	---

Required Reason (for mod commands)

!module reqreason	Requires mod commands like kick, ban, and mute to have a reason in order to be performed
-------------------	--

Admins

Admins have the most power whilst using Gaius. They can configure the bot freely and completely for the specific guild. It is very much recommended to only give the "Owner" role the "Admin" permissions for Gaius. Admins are automatically exempt from Auto-mod measures.

Command	Description	Example
!admin add rolename	Sets the role as bot admin.	!admin add Admins
!admin rem rolename	Removes that role as bot admin.	!admin rem Admins
!admin list	List all current admin roles.	!admin list

Moderators

Moderators are the chat police for guilds. Mods cannot configure the bot, however, they can use a range of commands to moderate servers. Mods are also automatically exempt from Auto-mod measures.

Command	Description	Example
!mod add rolename	Sets the role as bot moderator.	!mod add Mods
!mod rem rolename	Removes that role as bot mod.	!mod rem Mods
!mod list	Lists all current mod roles.	!mod list

Helpers

Helpers are like trial mods, they have instant access to the `!warn` command only. They are also exempt from Auto-mod measures.

Command	Description	Example
---------	-------------	---------

!helper add rolename	Sets the role as bot helper.	!helper add Helpers
!helper rem rolename	Removes that role as bot helper.	!helper rem Helpers
!helper list	Lists all current helper roles.	!helper list

Bypass Roles

Roles marked with the bypass command will be ignored by Gaius when it comes to auto-mod measures, just like staff.

Command	Description	Example
!bypass add rolename	Adds that role to the bypass.	!bypass add Trusted
!bypass rem rolename	Removes role as bypass.	!bypass rem Trusted
!bypass list	Lists all current bypass roles.	!bypass list
!bypass help	Displays help embed.	!bypass help

List of Bypasses

- Filter
- Invite
- URL
- Spam
- Duplicate
- Mention
- Emoji
- Newline
- Image
- Slowmode

Aliases

Aliases can be quite useful. Let's say you want to have users use the bird command but want !burb to work too. You can add an alias for the bird command so !burb triggers the bird command.

You can also disable let's say the ban command entirely and only allow alias versions you make like !bean.

Command	Description
!alias command force !alias ban force	Ignore this command and only accept aliases of it
!alias command trigger !alias ban bean	Use this as an alternative to the specified command Now bean will execute the ban command
!alias ban force	Now the ban command only works via aliases
!alias list	Display all aliases

Command	Description
!unalias command force	Removes the force alias
!unalias command trigger	Removes the trigger alias
!unalias ban force	
!unalias kick	

Permission Tuning

Restrict

Restrict a command or module to only be used in a certain channel, by a certain role, or by a certain user. Supply what type by adding role and rolename, member mention, or a channel mention.

!help restrict	Displays the help embed and examples.
!restrict ban @Mention !restrict ban Moderator !restrict ban @Moderator !restrict ban #staff	Restrict who and where the ban command can be utilized.
!cmdperm ban	Display current tuned settings for the ban command.

Allow

Allows command permissions override, so that the designated, channel, role, or member can use the command. This is for use when someone does NOT have permission to use a command and you want them to.

!help allow	Displays the help embed and examples.
!allow kick @Mention !allow kick Helpers !allow kick @Helpers	Restrict who and where the kick command can be utilized.
!cmdperm kick	Display current tuned settings for the kick command.

Block

Block usage of a command or module by specific members, roles or in a specific channel. Supply what type of ignore by adding **server**, **role** and **rolename**, **member mention**, or a **channel mention**.

This is for use when someone HAS permission to a command, but you don't want them too.

!help block	Displays the help embed and examples.
-------------	---------------------------------------

!block mute @Mention !block mute Trial-Mods !block mute @Trial-Mods !block mute #General	Restrict who and where the kick command can be utilized.
!cmdperm mute	Display current tuned settings for the mute command.

Free

Clean a command of usage restrictions, takes command or module name and the same format as allow and block.

This is for when you block, restrict etc a command or module. You can use Free to undo it.

!help free	Displays the help embed and examples.
!free kick	Frees the command/module of all restrictions on it.
